

**Introducing the NEW RTM-101-LP LOW PROFILE Series form ACARI !  
August, 2015**

Over the past 4 years, ACARI Engineering has successfully introduced a revolutionary way to mount lights and equipment to the fleet truck market. With over 25,000 ACARI RTMs in the field, we have listened to our customers and have developed changes in design and packaging that make the ACARI experience easier, faster, lighter, and better. The NEW ACARI LP Series continues to provide the same aluminum backbone structure and our proprietary clamping system, but once again, ACARI Engineering has taken more weight out of the product and reduced wind resistance by over 35% The NEW ACARI RTM 101-LP is the same 22" in width but 1" longer front to back. With the NEW 101LP, gone is the heavy upper deck, and gone are the endcaps and gaskets. Attachment of the new LP deck is simple and straight forward with two screws. As a result, there are less component parts, less confusion, less weight, and less wind resistance.

- Same durable anodized aluminum lower backbone and clamping system
- NEW aluminum platform with more area
- NEW, UV protected satin black power coat finish
- 35% less wind resistance, 10% less weight, Easier to install
