MOBILE POLICE RADAR CERTIFICATION

Parr Public Safety Equipment introduces police radar certification at your site.

Contact us today for pricing and to schedule your certification!

- No need to remove any part of your radar unit and send it out for certifications. You don't have to spend money shipping and out of service time.
- Certification using the same unit as the Ohio State Highway Patrol. We use the Vocar PRO-TECT Police Radar Certification System.
- **All major brands:** PRO-TECT police radar certification system can certify radar units that use the FCC approved radar frequencies for X, K, and KA-bands. Kustom Signals, MPH Industries, Decatur Electronics, and Stalker Radar are among the brands of radar units that use these frequencies.
- Our certification is a series of diagnostic tests performed on police radar equipment to verify the unit is functioning in accordance with the equipment manufacturer's specifications. Our equipment will work with any radar brand or model including all hand held and dash mounted units.
- Numerous state and local governments require police departments to perform periodic, comprehensive certifications of radar. This certification guarantees equipment accuracy and court acceptance when cases involving speeding violations are presented.
- **Investment protection:** Periodic radar certifications can give police early warning that units may be in need of repair.

Police Radar Accuracy

- Our system is NIST traceable and meets radar manufacturers' recommended radar certification standards, including performing the vital center frequency test. Performing a Center Frequency Test is the only way to guarantee that a radar is displaying correct speed results.

We're bringing radar certification to you!

Keep radar units accurate and court acceptable without leaving your facility.
